

PearlSnow®
Product Family – Choosing the Right Surface

One system philosophy. Five
clearly defined use cases.

PearlSnow offers a complete family of synthetic snow and sliding surfaces, each engineered for a specific purpose.

All products share the same core design principles — durability, outdoor stability and modular installation — but are deliberately tuned for different users, speeds and environments.

This overview helps operators, partners and designers choose the right surface for the right job.

Product		Primary Focus	Speed Level	User Level	Typical Use
DreamSnow®		Comfort & confidence	Moderate	Beginner	Ski schools, children zones
DreamSlide®		Leisure & fun	Medium–High	Beginner	Family tubing & attractions
PearlSnow®		All-round reliability	Medium–High	Intermediate Suitable for riders of all levels	Ski, Snowboard & Tubing
PearlSlide®		Speed & throughput	High	Advanced	High-speed tubing, connectors
PearlTile®		Precision & performance	High	Advanced	Racing, freestyle, elite training

DreamSnow® Precision & performance Balanced glide, predictable behaviour and low operational complexity.	PearlSnow® All-Round Resort Use Balanced glide, predictable behaviour and low operational complexity.	DreamSlide® Leisure & Family Experience Smooth, accessible and low-stress for operators and guests
--	---	--

PearSlide®

Speed & Flow

Choose PearlSlide for premium tubing, start zones and fast connectors.

PearlTile®

Precision & Elite Performance

Maximum edge control and repeatability, minimal forgiveness

PearlSnow's strength lies in matching the surface to the use case.

Many successful projects combine multiple surfaces, for example	
For ski schools and progression zones	DreamSnow + PearlSnow
For mixed leisure resorts	PearlSnow + DreamSlide
For professional training and competition areas	PearlSlide + PearlTile
